

METHOD OF MAKING ARTIFICIAL NAIL AND APPARATUS MAKING THEREFOR

Abstract of Disclosure

5

Disclosed is a method of making artificial nail, including a printed pattern layer. A film having a transfer portion with a printed pattern is placed between two surfaces forming a cavity with a hole. A fluid resin is injected into the cavity through the hole and contacting the transfer portion. The resin solidifies and integrates with the transfer portion, which forms an artificial portion with the printed pattern. Also disclosed is an apparatus for use in making the artificial nail. The apparatus includes a mold including the two surfaces and a film supplier feeding the film with the transfer portion to the mold.
